

Data, Solution Spec, and Example Code

Solution spec: `spec.py`

Example for the spec: `solution.py`

Running envelope: `go.py`

The treebank: `data/`

Usage

Some utility functions for trees are provided. Also an example for how and where to write the output parses to, from your code.

1. To play with these utilities, paste the contents of `util.example.py` into a jupyter notebook, or, run:

```
python -m util.example
```

2. To run your code through the submission envelope, e.g. to verify before submitting:

```
python go.py
```
